

How to Teach on the Page Innovations Portal

A complete, step-by-step guide for instructors — getting approved, running live sessions, taking attendance, setting and grading work, and tracking your students.

Audience: Instructors and teaching staff

Portal: learn.pageinnovations.com.ng

Document version: 1.0

What's in this guide

1. How instructor access works at Page Innovations
2. How to apply to teach
3. What happens while your application is under review
4. How to log in and reach the instructor portal
5. How to switch between teaching and learning views
6. How to find your way around — dashboard and sidebar
7. How to work with the courses assigned to you
8. How to build and manage modules and lessons
9. How to schedule and run a live session
10. How to take attendance with a check-in code
11. How to create and manage assignments
12. How to grade assignments and give feedback
13. How to create a test
14. How to release test results
15. How to monitor your students' progress
16. How to post an announcement
17. How to communicate through Messages
18. How to manage your own profile and security
19. Good practice and classroom policy
20. Troubleshooting and frequently asked questions

About your portal. Page Innovations runs an academy model: the administration curates the course catalogue centrally, and instructors teach the courses assigned to them. For that reason *Create Course* and *Contribute Questions* are switched off in your sidebar. Everything you need to teach — live sessions, attendance, assignments, tests, and student tracking — is fully available.

1. How instructor access works

Understanding this properly prevents most of the confusion new instructors run into.

Nobody signs up as an instructor

Every account created on the portal — whether by the registration form or by **Sign in with Google** — starts as a **student** account. There is no "register as instructor" option, and this is by design. Teaching access at Page Innovations is *granted*, never self-declared. It is earned in one of two ways:

Route	How it works
You apply	You complete the instructor application form. A Page Innovations administrator reviews it and approves or declines. On approval, teaching access is switched on for your existing account.
The office onboards you	Page Innovations staff create your account directly through the Onboarding Centre, complete with your employment details, and hand you a temporary password. Teaching access is granted as part of that process.

One account, two capabilities

The portal deliberately keeps a single account per person. When you are approved to teach, your account gains teaching capability but keeps its underlying student base — so if you ever want to take a Page Innovations course yourself, you can, on the same login. You are not "still a student" in any meaningful sense; you simply have both capabilities available. In the admin's user list you appear as an **Instructor**.

Why Google sign-in is hidden on the instructor login. Because Google sign-up only ever creates a student account, offering it to someone trying to log in as a teacher was misleading. Sign in with your email and password instead.

2. How to apply to teach

Use this if the office has not already created your account.

If you do not yet have an account

- 1 Go to `learn.pageinnovations.com.ng`.
- 2 Find the **Become an Instructor** or **Apply to Teach** link — it is on the landing page and beneath the login form.
- 3 Work through the application wizard. It both creates your account and submits your application in one pass.
- 4 Submit.

If you already have a student account

- 1 Log in as normal.
- 2 On your dashboard, click the **Become an Instructor** call to action.
- 3 Complete the shorter wizard — it reuses the account details you already have.
- 4 Submit.

What the application asks for

Information	What to provide
Personal details	Full name, email, phone number, and address.
Biography	A short professional profile. Students may see this, so write it for them.
Qualifications	Your degrees, certifications, and professional credentials.
Experience	Your teaching and industry background — be specific about years and roles.
Subjects	The subject areas you are competent to teach.
Portfolio link	Optional: a website, GitHub profile, or portfolio.
CV and credential documents	Upload your CV and supporting certificates. The reviewer opens each of these.

Make the reviewer's job easy. A complete, specific application is approved faster than a thin one. Name your uploaded files sensibly and make sure any link you provide actually opens.

3. While your application is under review

When you submit, you land on an **"Application under review"** page. This is the correct and expected screen — it is not an error.

- **You do not need to verify your email.** Instructor applicants skip email verification, because the administrator's review is itself the identity check.
- **Your account exists and works.** You can log in, but until approval it behaves as a normal account without teaching tools.
- **Approval is a human decision.** A Page Innovations administrator reads your application, opens your documents, and decides. There is no automatic approval and no fixed turnaround — chase the office if it is taking longer than you expected.

The three possible outcomes

Outcome	What it means for you
Approved	Teaching access switches on. Log out and back in, and the instructor portal is available.
Rejected	The administrator records a reason. Contact the office to discuss it or to reapply with stronger detail.
Revoked	Applies to a previously approved instructor whose access has been withdrawn, with a reason recorded. Speak to the office.

If you were approved but still see the student dashboard, sign out completely and sign back in. Your session is holding the older permissions until it is refreshed.

4. How to log in and reach the instructor portal

- 1 Go to `learn.pageinnovations.com.ng` .
- 2 Click **Sign In** .
- 3 Enter your email address and password. (Google sign-in is intentionally not offered here — see section 1.)
- 4 If two-factor authentication is enabled on your account, enter the current 6-digit code from your authenticator.
- 5 Because your account can both teach and learn, you are shown a chooser. Click the **Instructor** tile.
- 6 You arrive at your instructor dashboard.

Temporary password? If the office onboarded you and gave you a temporary password, change it immediately after your first login — see section 18.

5. How to switch between teaching and learning

Your account carries both capabilities, and you move between them without logging out.

- 1 Look for the view switcher in the top bar — labelled along the lines of **Switch to student** or **Switch to teaching** .
- 2 Click it. The sidebar and dashboard swap over to the other view.
- 3 Switch back the same way whenever you like.

The portal remembers the view you were last in, so you generally land where you left off. If you find yourself looking at the wrong sidebar, this switcher is the fix.

6. How to find your way around

The top bar

- **Search** — jump to a course or lesson.
- **Messages icon** — unread chat count.
- **Bell icon** — notifications.
- **View switcher** — move between teaching and student views.
- **Light/dark toggle** and **your avatar** — theme, Profile, Settings, Sign Out.

The sidebar, item by item

Menu item	Group	What it is for
Dashboard	—	Your teaching overview: courses, upcoming sessions, and work waiting to be graded.
My Courses	—	The courses assigned to you. Your entry point to content, modules, and lessons.
Messages	—	Chat with your students, and with other instructors in the Instructors' Lounge.
Notifications	—	Alerts: submissions received, students enrolled, and more.
Announcements	—	Post notices to your classes.
Live Sessions	Teach	Schedule, start, and manage your live classes.
Assignments	Teach	Set assignments and grade submissions.
Attendance	Teach	Generate check-in codes and review attendance registers.
My Tests	Teach	Build tests, assign them, and release results.
My Students	Teach	Your enrolled students and their progress.

Switched off for Page Innovations: *Create Course* (the office curates the catalogue) and *Contribute Questions* (the central question bank is administered centrally). If you need a new course created or questions added to the bank, ask the administrator.

7. How to work with your assigned courses

Courses are created by the administration and assigned to you. You are responsible for the teaching content and delivery within them.

- 1 Click **My Courses** in the sidebar.
- 2 You see the courses assigned to you, each with its enrolled-student count and status.
- 3 Click a course to open it and manage its content, or to reach its analytics and student list.

A course you expect is missing? Assignment of instructors to courses is done by the administrator. Ask the office to assign you to it — you cannot assign yourself.

8. How to build modules and lessons

Course content is a two-level structure. **Modules** are the major sections — think of them as weeks or units. **Lessons** are the individual pieces of teaching inside each module.

Adding a module

- 1 Open the course from **My Courses** and go to its content or builder view.
- 2 Click **Add Module**.
- 3 Enter a clear module title — a title is required. "Module 3: Working with Databases" beats "Module 3".
- 4 Add a short description explaining what the module covers.
- 5 Save. The module appears in the outline, and you can expand or collapse it.

Adding a lesson

- 1 Expand the module the lesson belongs to.
- 2 Click **Add Lesson** within that module.
- 3 Give the lesson a descriptive title.
- 4 Add the content — a video, a written article, or an attached file, depending on the lesson type you choose.
- 5 Save. Use the preview to check it renders the way a student will see it.

Editing, reordering, and removing

Modules and lessons can be edited or deleted from the same outline. Order matters — students work top to bottom, so arrange your material in teaching order.

Deleting is not reversible. Removing a module removes the lessons inside it. If you only want to keep material out of students' hands for now, ask the administrator about scheduled release instead of deleting.

Upload sensibly. Compress large videos before uploading, and prefer PDF for handouts so formatting survives on every device.

9. How to schedule and run a live session

Live sessions are your scheduled classes. The portal holds the schedule and the joining link, and notifies your students.

Scheduling a session

- 1 Click **Live Sessions** in the sidebar, under the **Teach** group.
- 2 Click **Create** (or **Schedule session**).
- 3 Enter a **Title** — required. Make it recognisable in a list, for example "Week 4 — Query Optimisation".
- 4 Add a **Description** of what the session covers.
- 5 Select the **Course** the session belongs to — required. This determines which students see and are notified about it.
- 6 Set the **Scheduled date and time** — required. Enter it in your own local time; the portal handles the conversion.
- 7 Choose the **platform**:
 - **Zoom** — the meeting is created automatically when you schedule, and students receive the join link straight away. You do not need to create anything in Zoom yourself.
 - **Another platform** — paste the **Meeting URL** yourself. This field is required when you are not using Zoom.
- 8 Click **Create**. The session appears in your list and your students are notified.

Running the session

- 1 On the day, open **Live Sessions**. Sessions are ordered live first, then upcoming, then past.
- 2 Click **Start** / **Go Live** on the session. Its status changes to **live** and it shows a red pulsing indicator for students.
- 3 Join the meeting itself through the link.
- 4 Take attendance — see section 10.
- 5 Teach. When you are done, end the meeting in your platform; the session moves into your past list.

Overdue chips. A session past its start time may show an "Overdue" marker. This is only a visual reminder — it never blocks you. You can still start a session late.

10. How to take attendance

Attendance uses a **6-digit code** that you generate and display. Students type it into their portal to check in. Codes are deliberately short-lived so that attendance reflects who was genuinely present.

- 1 Click **Attendance** in the sidebar, under the **Teach** group.
- 2 Pick the session you are teaching. Live sessions are listed first.
- 3 Click **Generate code**. A 6-digit code appears with a countdown showing how long it remains valid.
- 4 Display the code to your class — project it on screen in the room, or share your screen in a virtual class. You can also copy it to paste into the chat.
- 5 Give students a moment to check in. The register updates as they do.
- 6 If the countdown expires and students are still checking in, click **Generate code** again for a fresh one. There is no limit on how many times you can do this.
- 7 Review the register before you close the session and correct anything that is wrong.

Generating a code puts the session live. If a session is still marked as scheduled, generating a code flips it to live automatically — otherwise students would have no check-in button. So generating the code is all you need to do.

On code sharing. Short expiry windows exist to stop codes being forwarded to absent students. Generate the code *during* the class rather than in advance, and regenerate it if you suspect it has been passed around.

Reviewing and correcting the register

The attendance view for each session shows who checked in and who did not. Use it to correct genuine problems — a student whose connection dropped, or someone who arrived after the code expired. Students cannot amend their own records, so they will come to you.

11. How to create and manage assignments

- 1 Click **Assignments** in the sidebar, under the **Teach** group.
- 2 Click **Create** / **New assignment** .
- 3 Give it a clear **title**.
- 4 Write the **brief**. Be explicit about what you want, the format you expect, and how it will be marked. Most grading disputes trace back to a vague brief.
- 5 Select the **course** it belongs to.
- 6 Set the **due date**. Enter it in your local time — the portal converts it correctly for everyone.
- 7 Set the **total marks** available.
- 8 Save. The assignment appears for your students, and they are notified.

The assignment list shows each assignment with its course, due date, and how many submissions have arrived, so you can see at a glance what is waiting.

12. How to grade assignments

- 1 Open **Assignments** and select the assignment you want to mark.
- 2 Open its submissions. Use the filter to show **pending** submissions — the ones not yet graded — or **graded** ones you have already dealt with.
- 3 Open a student's submission and review their file or written answer.
- 4 Enter a **score**, out of the total marks you set.
- 5 Write **feedback**. This is the part students learn from — say what worked, what did not, and what to do differently next time.
- 6 Save the grade. The submission is marked graded and the student is notified.
- 7 Move to the next pending submission and repeat.

Grade in batches. Filtering to pending submissions and working straight through is faster and produces more consistent marking than grading one submission whenever it happens to arrive. If you re-open a graded submission, the existing score and feedback are pre-filled, so you can revise a mark cleanly.

Late submissions are flagged as overdue but still reach you. Whether you accept them is your call, in line with Page Innovations policy — apply it consistently across the class.

13. How to create a test

- 1 Click **My Tests** in the sidebar, under the **Teach** group.
- 2 Click **Create test**.
- 3 Enter the test **title** and select the **course**.
- 4 Set the parameters: the **time limit**, the number of **attempts** allowed, and the **pass mark**.
- 5 Decide whether results are shown immediately on submission, or withheld until you release them. See section 14 before choosing.
- 6 Add your questions. You can draw on the central question bank for the course, subject to what the administrator has made available.
- 7 Save the test, then **assign** it to your students. They are notified and it appears under their *My Assigned Tests*.

Take your own test once before assigning it. It is the quickest way to catch a wrong answer key, a confusing question, or a time limit that is far too tight.

14. How to release test results

Tests set to show results immediately need nothing further — students see their score the moment they submit. If you chose to withhold results, you control when the class sees them.

- 1 Open **My Tests** and select the test.
- 2 Open its results view, where you can see every attempt and score.
- 3 Review the attempts and deal with any marking that needs your attention.
- 4 Release results either **to the whole class at once**, or **to individual students** if you need to handle someone separately.
- 5 Released students are notified and can then see their score and review their attempt.

Why withhold results? It lets you check for problems with a question before the whole class sees a score, and it stops early finishers broadcasting answers to students who have not yet sat the test.

15. How to monitor your students

- 1 Click **My Students** in the sidebar, under the **Teach** group.
- 2 You see the students enrolled in the courses you teach.
- 3 Open a student to see their individual progress: lessons completed, assignments submitted and graded, test attempts, and attendance.

Course-level analytics are also available from within a course, giving you completion rates and engagement across the whole class rather than one student at a time.

Reading progress correctly

A student's progress percentage reflects the lessons they have *marked complete*. A student who watches everything but never ticks lessons off will look inactive. If someone's progress looks implausibly low, ask before assuming they have disengaged.

Check this weekly. A student drifting is far easier to recover in week three than in week nine. Progress plus attendance together give you an early warning.

16. How to post an announcement

- 1 Click **Announcements** in the sidebar.
- 2 Click **Create** / **New announcement** .
- 3 Write a specific title — students scan a list, so "Friday's class moved to 2pm" beats "Important".
- 4 Write the body.
- 5 Choose the course whose students should receive it.
- 6 Post. Students see it under their Announcements and receive a notification.

Use announcements for anything the whole class needs: schedule changes, deadline reminders, material corrections, exam arrangements. Use Messages for individual matters.

17. How to use Messages

- 1 Click **Messages** in the sidebar, or the message icon in the top bar.
- 2 The left panel lists your conversations.
- 3 Click one to open it, type at the bottom, and press Enter. Messages deliver in real time.

What you will find there

Conversation type	Purpose
Course chat rooms	A room per course, shared with all enrolled students. Good for questions that benefit the whole class.
Direct messages	One-to-one conversations with individual students.
Instructors' Lounge	A private room for Page Innovations instructors only — no students. For coordination between teaching staff.
Instructor-to-instructor DMs	Private conversations with colleagues across the platform.

Chat is moderated. Administrators can review course chat rooms and remove inappropriate content. Treat the chat as an extension of the classroom.

18. How to manage your profile and security

Your profile

- 1 Click your avatar in the top bar and choose **Profile**.
- 2 Update your photo, biography, and contact details.
- 3 Save.

Keep your biography current — students read it, and it is part of how Page Innovations presents its teaching staff.

Changing your password

- 1 Click your avatar and choose **Settings**.
- 2 Open the security or password section.
- 3 Enter your current password, then the new one twice.
- 4 Save. Passwords need at least 8 characters with an uppercase letter, a lowercase letter, and a number.

Change any temporary password immediately. If the office issued you one during onboarding, replace it the first time you log in.

Two-factor authentication

Instructor accounts can affect student grades and records, so two-factor authentication is strongly recommended. Enable it in Settings, link your authenticator app, and store any backup codes somewhere safe.

Signing out

Click your avatar and choose **Sign Out**. Always sign out on classroom or shared machines — leaving a session open leaves your grading tools exposed.

19. Good practice and classroom policy

At the start of a course

- Check your course outline is complete and in teaching order before day one.
- Post a welcome announcement setting out how you will run the course, your expectations, and how quickly you respond to messages.
- Confirm your live sessions are scheduled with the correct dates and working join links.

Every week

- Generate attendance codes during class, not before.
- Grade submissions promptly — students act on feedback while the topic is fresh.
- Review progress and attendance to catch students slipping.
- Answer course chat questions, or say when you will.

Consistency and fairness

- Apply your late-submission policy the same way for everyone.
- Say in the brief how work will be marked, before it is submitted.
- Handle individual matters — grades, conduct, personal circumstances — by direct message, never in the course room.
- Treat student records as confidential. Grades, attendance, and next-of-kin details are not to be discussed outside Page Innovations.

20. Troubleshooting and FAQs

I was approved but I still land on the student dashboard.

Sign out completely and sign back in — your session is holding the old permissions. After that, use the view switcher in the top bar to move to the teaching view.

Why is there no "Sign in with Google" on my login?

Deliberate. Google sign-in only ever creates a student account, so offering it to teachers was misleading. Use your email and password.

Why can I not create a course?

Page Innovations curates its catalogue centrally, so *Create Course* is switched off. Ask the administrator to create the course and assign you to it.

A course I am supposed to teach is not in My Courses.

The administrator assigns instructors to courses. Ask the office to assign you.

My students say they cannot see the check-in button.

They can only check in while the session is live and a code exists. Generate a code — that also flips the session live. Their page updates automatically, so they do not need to refresh.

A student missed the code before it expired.

Just generate a new one — there is no limit. If the class has already ended, correct their record from the session's attendance view.

A student says they submitted but I see nothing.

Check you are looking at the right assignment and that your filter is not set to "graded". If it is genuinely missing, ask them to resubmit and report it to the administrator.

My students cannot see their test scores.

The test is set to withhold results. Open the test's results view and release them — to the whole class or to individuals. See section 14.

My live session time looks wrong.

Enter times in your own local time; the portal converts them. If a time still looks off, re-open the session and confirm what is saved, then report it to the administrator.

Zoom did not create a meeting.

Zoom meetings are created automatically when you schedule with the Zoom option. If no link appears, report it to the administrator — the integration is configured centrally. In the meantime, create the meeting yourself and paste the URL into the session.

A student's progress shows 0% but they attend every class.

Progress counts lessons *marked complete*. Remind your class to mark lessons complete as they finish them.

Who to contact

Issue	Who to ask
New course needed, course assignment, enrolling or removing a student	Page Innovations administrator
Question bank additions, categories	Page Innovations administrator
Zoom, email, or other integration failures	Page Innovations administrator
Instructor application status, access revoked	Page Innovations administrator / office
Student conduct or welfare concerns	Page Innovations office , following policy

Page Innovations Instructor Guide, version 1.0. Screens may differ slightly as the portal is improved. If something on your screen does not match this guide, the screen is right and the guide needs updating — please tell the office so we can correct it.
